“O, SAE Can You See?”: Developing A Geographic Eye

History is to time as geography is to ____________. How would you complete this analogy? The answer is space. The space of the earth's surface is the point of focus for geographers.

Cultural geographers study regions to determine the human imprint on the physical landscape also known as the “cultural landscape”* or “built environment.”*

By observing elements of the material culture* in a neighborhood, geographers get a sense of the non-material culture* of a region.

For this assignment, you are the geographer doing fieldwork! Fieldwork allows direct observation “on the ground” and is a great way to get to know your chosen neighborhood. You will walk around and observe a neighborhood in Baton Rouge and identify, describe and analyze the human impact on it. Have fun!

What Do I Do?

Step 1: “O” is for Observation

Observing is not the same as looking; observing is looking + thinking about what you see.

- Take a trip to a Baton Rouge neighborhood listed in the table. Observe, photograph and collect data about the material culture in the neighborhood.

Examples of material culture:
Housing types, religious buildings, shops, signs, schools, community organizations, local papers, athletic facilities, restaurants, parks, monuments, statues.

## Neighborhoods in Baton Rouge

<table>
<thead>
<tr>
<th>Downtown/Central Business District (CBD)</th>
<th>Spanish Town</th>
<th>Garden District</th>
</tr>
</thead>
<tbody>
<tr>
<td>Beauregard Town</td>
<td>Third Street Corridor/Historic District</td>
<td>LSU/Lakeshores</td>
</tr>
</tbody>
</table>

### Step 2: “S” is for Speculation

What can I guess about this area based on my observation?

Use your observations and preliminary research to try to **identify the culture** of the area. Below are the kinds of questions you should answer in your paper:

- What human-made features can you identify in your area? (buildings, churches, parks, etc.) What purposes do these features have?

- Is there vegetation? Bodies of water? What purpose do they serve, if any? What are the impacts of vegetation and bodies of water in the area?
Does the neighborhood appear poor/wealthy/middle class? What evidence do you observe that offer clues?

Who lives there? How do you know? Were there other groups living there before the present time?

Has the area changed?

Is there evidence of *sequent occupance?*

Is there an *ethnic enclave?*

Are there different architectural styles? If so, describe them in your own words.

Is there a clear border to the area? How do know?

- Photographs are an essential part of this project. You must include 10 to 15 pictures that you feel represent the culture of the area. This is your primary data along with your observations.

- You should also gather secondary data from **reliable** sources (e.g. census data, flood information from local, state and federal sources). You will need to include a brief history of the area. Most of these neighborhoods have a website. **Note about Wikipedia** – this can be a good starting point but use the Wikipedia article sources, NOT the actual Wikipedia article.

**Step 3: “A” is for Analysis**

What can you understand about the human impact on the area based on evidence?

How have humans organized the space in this neighborhood?
You will use the photographs, census information, history, and more in-depth research you conducted to complete a written report describing and explaining your findings concerning the cultural landscape of your study area.

Remember, each photo must have a caption explaining the nature of the picture (what is the picture showing?).

**Step 4: “E” is for Evaluation**

Your final paragraph will be a short (150-200 word) evaluation of this project. What did you learn? Did you enjoy it? Were there any surprises or “Aha!” moments?

*Helpful terms:*

**Built environment:** physical artifacts that humans have created and that form part of the landscape, e.g., buildings, roads, signs and fences.

**Culture:** body of customary beliefs, social forms and material traits that constitute a group’s distinct tradition.

**Cultural landscape:** modifications to the environment made by humans, includes the built environment and agricultural systems

**Ethnic enclave:** a place with a high concentration of an ethnic or religious group that is distinct from those in the surrounding area.

**Material culture:** Physical objects, resources and spaces people use to define their culture

**Non-material culture:** ideas, beliefs, practices, customs, knowledge that influence how people live, behave

**Sequent occupancy:** the pattern of multiple uses of a building over the years, layering over each other, each group leaving its own imprint on the culture. (e.g. plantation homes now used as bed and breakfasts)

**What Do I Turn In?**

You will complete a 2-3-page report on your observation. You will attach 10-15 color photos with captions, a hand-drawn map of your neighborhood and a Works Cited page. The report should be double-spaced, typed, using a 12 point Times New Roman font. **The report is due on August 16th.**
**Suggested structure and order of your report:**

Title page with name and heading (you decide what to name your report)
Paragraph 1: Introduction: name of neighborhood, why you chose it, brief history
Paragraphs 2: Description of observations
Paragraphs 3 and 4: Analysis
Paragraph 5: Evaluation
2-3 pages of photographs with captions
Hand drawn map of your neighborhood
Works Cited page

**Formal requirements:**

Report should be at least 5 paragraphs with an introduction, conclusion and evaluation.
Typed, double-spaced, 12 pt. font, Times New Roman, 2-3 pages

Work Cited should be in alphabetical order by author. If no author, use the title of the publication.
Hand-drawn map: This should be drawn with a fine-tip black Sharpie on a blank 8 ½ x 11 sheet of paper. It is up to you how detailed and colorful you want your map to be.

10-15 photos should be printed in color with a caption.

During the first two weeks of class, you will have the opportunity to present your findings to the class in a brief (2-3 minute) presentation.

**Safety and Etiquette:**

- Do not go to the neighborhood by yourself. You should go with a trusted adult, parent or older sibling.
- Avoid taking pictures from cars, unless you can do so safely.

- This is a walking fieldwork assignment-get out and walk around!
- Do not go to the neighborhood at night.
- If you take decide to take interior pictures of a house of worship or a private establishment, make sure to ask permission.
- Do not take pictures of people without their permission.
